

# Module Interface Specification for Truss Tool

Maryam Valian

March 20, 2023

# 1 Revision History

| Date       | Version | Notes                 |
|------------|---------|-----------------------|
| 16/03/2023 | 1.0     | Initial Draft         |
| 17/03/2023 | 1.1     | Update Control module |
| 19/03/2023 | 1.2     | Update formulas       |
| 20/03/2023 | 1.3     | Update other modules  |

## 2 Symbols, Abbreviations and Acronyms

See SRS Documentation at [here](#).

### 3 Introduction

The following document details the Module Interface Specifications for Truss Tool is software designed for engineers and students to analyze a truss.

Complementary documents include the System Requirement Specifications and Module Guide. The full documentation and implementation can be found at [Truss Tool repository](#).

### 4 Notation

The structure of the MIS for modules comes from [Hoffman and Strooper \(1995\)](#), with the addition that template modules have been adapted from [Ghezzi et al. \(2003\)](#). The mathematical notation comes from Chapter 3 of [Hoffman and Strooper \(1995\)](#). For instance, the symbol  $:=$  is used for a multiple assignment statement and conditional rules follow the form  $(c_1 \Rightarrow r_1 | c_2 \Rightarrow r_2 | \dots | c_n \Rightarrow r_n)$ . Capital letters are used to indicate sequenced data type.

The following table summarizes the primitive data types used by Truss Tool.

| Data Type      | Notation     | Description  |
|----------------|--------------|--|
| character      | char         | a single symbol or digit                                       |
| integer        | $\mathbb{Z}$ | a number without a fractional component in $(-\infty, \infty)$ |
| natural number | $\mathbb{N}$ | a number without a fractional component in $[1, \infty)$       |
| real           | $\mathbb{R}$ | any number in $(-\infty, \infty)$                              |

The specification of Truss Tool uses some derived data types: sequences, strings, and tuples. Sequences are lists filled with elements of the same data type. Strings are sequences of characters. Tuples contain a list of values, potentially of different types. In addition, Truss Tool uses functions, which are defined by the data types of their inputs and outputs. Local functions are described by giving their type signature followed by their specification.

### 5 Module Decomposition

The following table is taken directly from the Module Guide document for this project.

| Level 1                  | Level 2   |
|--------------------------|---|
| Hardware-Hiding Module   |   |
| Behaviour-Hiding Module  | Input parameters module<br>Input verification module<br>Specification parameters module<br>Output format module<br>Output verification module<br>Support reactions module.<br>Force decomposing module<br>Internal force module<br>Control module |
| Software Decision Module | Sequence data structure module<br>linear equation solver module   |

Table 1: Module Hierarchy

## 6 MIS of Control module

### 6.1 Module

Main

### 6.2 Uses

Input Module, Reaction Module, Internal Forces Module, Output Verification Module

### 6.3 Syntax

#### 6.3.1 Exported Constants

Not applicable.

#### 6.3.2 Exported Access Programs

| Name | In | Out | Exceptions |
|------|----|-----|------------|
| Main | -  | -   | -          |

### 6.4 Semantics

#### 6.4.1 State Variables

# from R1 and R2:

$n : \mathbb{N}$

$m : \mathbb{N}$

$J_n : \mathbb{R}$

$M_m : \mathbb{N}$

$F_m : \mathbb{R}$

$sp : \mathbb{N}$

$sr : \mathbb{N}$

# from R3:

$px : \mathbb{R}$

$py : \mathbb{R}$

$ry : \mathbb{R}$

# from R4:

$I_m : \mathbb{R}$

### 6.4.2 Environment Variables

This module has external interaction with an input file, an output file.

### 6.4.3 Assumptions

The path and the name of the given input file are correct.

### 6.4.4 Access Routine Semantics

Main():

- transition: Modifies the state of the Input module and the environment variables for the Output modules by following these steps:

Get (filename: String) from user which indicates input file. LoadParams(filename).

*#Find Support reactions ( $P_x, P_y, R_y$ )*

$$P_x = -\sum F_x$$

$$A = \begin{bmatrix} 1 & 1 \\ J_x(sp) & J_x(sr) \end{bmatrix}$$
$$B = \begin{bmatrix} -\sum F_y(i) \\ -\sum (J_x(i) * F_y(i)) \end{bmatrix}$$

$$(P_y, R_y) = Solve(A, B)$$

*#Find Internal Forces  $I_m$*

$$\theta = Decomp(n, m, J, M)$$

*#Compute  $a_{ij}, b_j$  elements of  $A, B$  from equilibrium equations:*

$$a_{ij} = I_m * \cos \theta_m, b_j = \sum_x \text{All forces and reactions at } j$$

or

$$a_{ij} = I_m * \sin \theta_m, b_j = \sum_y \text{All forces and reactions at } j$$

$$I = Solve(A, B)$$

*#Output  $P_x, P_y, R_y, I$*

verify-Output( $P_x, P_y, R_y, I$ )

output(file-name,  $P_x, P_y, R_y, I$ )

- output: output file
- exception: Input file not found

### 6.4.5 Local Functions

None.

## 7 MIS of Input Module

### 7.1 Module

Inputs

### 7.2 Uses

Input Verification Module

### 7.3 Syntax

| Name          | In     | Out          | Exceptions             |
|---------------|--------|--------------|------------------------|
| load_params   | string | -            | Input File Error       |
| verify_params | -      | -            | Input Parameters Error |
| $n$           | -      | $\mathbb{N}$ |                        |
| $m$           | -      | $\mathbb{N}$ |                        |
| $J_n$         | -      | $\mathbb{R}$ |                        |
| $M_m$         | -      | $\mathbb{N}$ |                        |
| $F_m$         | -      | $\mathbb{R}$ |                        |
| $sp$          | -      | $\mathbb{N}$ |                        |
| $sr$          | -      | $\mathbb{N}$ |                        |

#### 7.3.1 Exported Constants

Not applicable.

#### 7.3.2 Exported Access Programs

| Name   | In                    | Out        | Exceptions |
|--------|-----------------------|------------|------------|
| Inputs | input plain text file | Parameters | FileError  |

### 7.4 Semantics

#### 7.4.1 State Variables

# from R1 and R2:

$n : \mathbb{N}$

$m : \mathbb{N}$

$J_n : \mathbb{R}$   
 $M_m : \mathbb{N}$   
 $F_m : \mathbb{R}$   
 $sp : \mathbb{N}$   
 $sr : \mathbb{N}$

### 7.4.2 Environment Variables

InputFile: sequence of strings in the text file.

### 7.4.3 Assumptions

- Load parameters will be called before the values of any state variables will be accessed.
- The file contains the string equivalents of the numeric values for each input parameter. The order is important.

### 7.4.4 Access Routine Semantics

Load-Parameter():

- transition: Modifies the state variables from the input file:
  - Read sequentially from file and loads state variables from R1 and R2.
  - verify-input()
- output: None
- exception: file-Error, input-type-mismatch-Error

Verify-Input():

- transition: Modifies the state variables from the input file:
  - Read constants from specification module.
  - Check constraints as follows:
- output: None
- exception: Bad-parameters-Error

Table 2: Constraint check table

| Constraint                      | Error             |
|---------------------------------|-------------------|
| $n_{min} \leq n \leq n_{max}$   | BadInputSize      |
| $m_{min} \leq m \leq m_{max}$   | BadInputSize      |
| $m < n$                         | BadInputSize      |
| $ J  \neq n$                    | InconsistentInput |
| $ M  \neq m$                    | InconsistentInput |
| $ F  \neq n$                    | InconsistentInput |
| $J_{min} \leq J_j \leq J_{max}$ | BadInputSize      |
| $F_{min} \leq F_j \leq F_{max}$ | BadInputSize      |
| $M_{j,0} = M_{j,1}$             | BadMember         |
| $Sp > n, Sp < 0$                | BadSupport        |
| $Sr > n, Sr < 0$                | BadSupport        |
| $Sp = Sr = 0$                   | NoSupportDefined  |

## 8 MIS of Specification Parameters

### 8.1 Module

Specification

### 8.2 Uses

None.

### 8.3 Syntax

#### 8.3.1 Exported Constants

# From Table.2 SRS:

$n_{min} := 3$

$n_{max} := 20$

$m_{min} := 3$

$m_{max} := 30$

$J_{max}(i, j) := 200$

$J_{min}(i, j) := 0$

$F_{max} := 35000$

$$F_{min} := -35000$$

### 8.3.2 Exported Access Programs

N/A

## 8.4 Semantics

### 8.4.1 State Variables

N/A

### 8.4.2 Environment Variables

N/A

## 8.5 MIS of Support Reaction Module

## 8.6 Module

React

## 8.7 Uses

Sequence data structure module.

linear equation solver module.

## 8.8 Syntax

| Name  | In            | Out          | Exceptions           |
|-------|---------------|--------------|----------------------|
| React | params reacts |              | ReactionFailed Error |
| $n$   | $\mathbb{N}$  | -            |                      |
| $F_j$ | $\mathbb{R}$  | -            |                      |
| $J_j$ | $\mathbb{R}$  | -            |                      |
| $Sp$  | $\mathbb{N}$  | -            |                      |
| $Sr$  | $\mathbb{N}$  | -            |                      |
| $P_x$ | -             | $\mathbb{R}$ |                      |
| $P_y$ | -             | $\mathbb{R}$ |                      |
| $R_y$ | -             | $\mathbb{R}$ |                      |

### 8.8.1 Exported Constants

N/A

### 8.8.2 Exported Access Programs

| Name  | In   | Out                               | Exceptions  |
|-------|--|-----------------------------------|-------------|
| React | $(J, F$<br>$arrayofreal, sp, sr$<br>$Integer)$ | $: (P_x, P_y, R_y : Real)$<br>$:$ | ReactFailed |

## 8.9 Semantics

### 8.9.1 State Variables

None.

### 8.9.2 Environment Variables

N/A

### 8.9.3 Assumptions

None.

### 8.9.4 Access Routine Semantics

- Output:

$$Out := P_x = - \sum F_x$$

$$A = \begin{bmatrix} 1 & 1 \\ J_x(sp) & J_x(sr) \end{bmatrix}$$

$$B = \begin{bmatrix} - \sum F_y(i) \\ - \sum (J_x(i) * F_y(i)) \end{bmatrix}$$

$$Out := (P_y, R_y) = Solve(A, B)$$

## 9 MIS of Internal Forces Module

### 9.1 Module

Internal

## 9.2 Uses

Force decomposing module  
Sequence data structure module  
linear equation solver module

## 9.3 Syntax

### 9.3.1 Exported Constants

N/A

### 9.3.2 Exported Access Programs

| Name     | In  | Out        | Exceptions     |
|----------|---|------------|----------------|
| Decomp   | $\theta(M_m) : \mathbb{R}^2 \rightarrow \mathbb{R}$                     | $\Theta_m$ | decompFailed   |
| Internal | $I_m(F_j, \theta_m) : \mathbb{R} * \mathbb{R}^2 \rightarrow \mathbb{R}$ | $I_m$      | InternalFailed |

## 9.4 Semantics

### 9.4.1 State Variables

N/A

### 9.4.2 Environment Variables

N/A

### 9.4.3 Assumptions

None.

### 9.4.4 Access Routine Semantics

- Output:  $Out := I$  where:

$$a_{ij} = I_m * \cos \theta_m, b_j = \sum_x \text{All forces and reactions at } j$$

or

$$a_{ij} = I_m * \sin \theta_m, b_j = \sum_y \text{All forces and reactions at } j$$

$$I = \text{Solve}(A, B)$$

## 9.5 MIS of Output Verification Module

### 9.6 Module

verify-out

### 9.7 Uses

None.

### 9.8 Syntax

#### 9.8.1 Exported Constants

#### 9.8.2 Exported Access Programs

| Name       | In  | Out            | Exceptions   |
|------------|---|----------------|--------------|
| Verify-Out | $check(I_m, J_j) : \mathbb{R} * \mathbb{R} \rightarrow Boolean$ | Valid/NotValid | verifyFailed |

### 9.9 Semantics

#### 9.9.1 State Variables

N/A

#### 9.9.2 Environment Variables

N/A

#### 9.9.3 Assumptions

None.

#### 9.9.4 Access Routine Semantics

- Exception:  $\text{Exep} := (\sum (I_m(n) + F_m(n), P_x(n), P_y(n), R_y(n)) \neq 0) \Rightarrow \text{VerifyFailed}$

#### 9.9.5 Assumptions

None.

## 9.10 MIS of Output Module

### 9.11 Module

Output

## **9.12 Uses**

None.

## **9.13 Syntax**

### **9.13.1 Exported Constants**

output file name.

### **9.13.2 Exported Access Programs**

N/A

## **9.14 Semantics**

### **9.14.1 State Variables**

N/A

### **9.14.2 Environment Variables**

output file

### **9.14.3 Assumptions**

None.

## **9.15**

Assumptions None.

### **9.15.1 Access Routine Semantics**

- transition: Write to file the following: the input parameters from Param, and the calculated values  $I_m, P_x, P_y, R_y$ .
